SUBJECT : Variable Workday at NPIC

REFERENCES : a. Memo for D/Pers through DD/SQT fr D/NPIC dtd 10 Jul 74, sene subj.

b. Special Report on Flexible Working Hours, HBR January - February 1974

- 1. We have reviewed the proposal for a variable workday at MPIC and considered the possible effect of the adoption of such a proposal for the Agency.
- As we understand the proposal, all staff members would work a five-day week, eight hours a day, but would have the right to determine their own work hours between the hours of 0600 and 1800. Since systems of this type have been in ass in Europe for a number of years, with substantial increases in production and efficiency resulting, and are being tried in industrial corporations in this country, consideration is now being given to such systems in the Federal Government. They have been approved on an experimental basis elsewhere in the Federal Government and are considered within the requirements of Federal law and regulations. It is not apparent yet that such systems will turn out to be satisfactory in the long run. However, the benefits which have resulted from your initial trial, i.e., a general atmosphere of mutual trust, improved production, improved employee morale, easing of the traffic and parking problems, and reduction in short term absenteeism, seen to provide a sufficient basis for giving the system a more complote trial.
- 3. The adoption of any such system for one component may create a demand for similar systems elsewhere in the Agency. In order that we may determine practicability for other components, detailed information on all aspects of the system as needed.
- 4. Therefore, the establishment of the proposed variable workday system for NPIC is approved subject to the submission of monthly reports for a period of six months to the Office of Personnel, including information on the following:

AGREGISTRATIVE INTERNAL USE CHLY

## Approved For Release 2002/05/07; CIA-RDP83-01004R000200050001-7

## INTERNAL ESE CHIV

- a. What proportions of employees report for work at different hours; e.g., 0600, 0700, 0800, 09007
- b. What proportion of supervisors report for work at different hours; e.g., 0600, 0700, 0800, 0900?
- c. How is work coverage handled when employees or supervisors having essential functions are not available because of the variable hour system?
- d. What percentage of increase in production or efficiency has resulted? For what types of work has inprovement been noted?
- e. How have you determined effect on employee morale?
- f. How do you handle the problem of FLSA overtime for Non-Exempt employees?

MEMORANDEM FOR: Director of Personnel

: Deputy Director for Science and Technology THEOLOGY

SULUECT : Variable Workday at MPIC

1. In mid-Jennery 1974 MPIC initiated a 90-day experiment with a veriable workday for a limited number of components. We have now progressed to a point shere some concrete conclusions and recommendations can be asse. The princry goels of the experiment have been to determine if full implementation of a variable orkday sould be fessible and advantageous to beth employees and managers. In conjunction with these goals, we hoped to be able to shaver too basic quantions: (1) How would a variable ork achaiuls affect york efficiency? (2) Now would the employees and managers react to the changes in the work schedule?

- 2. Three branches, totaling 5: people have been involved since last January in the emperiment. Two of these branches are PI shops and the third is a breach that provides engineering support to the imagery explaintetion effort. The mix of functions among these branches has given as a good indication of hose wariable workday would affect operations in it were implemented for the entire Center. The plan we have been trying requires the employee to lork a five-day week, eight hour day between 0600 and 1800 hours.
- 3. In all of the branches the results of the experiment here favor able from both the employee and menagement points of view. Overall, the variable orkday has helped to create a general atmosphere of sutue! trust between employees and managers. It has given employees more responeibility in monitoring their own work hours and this has communicated to them menagement's confidence in their professionalism to do a consciention job with a minimum of supervision. It has had no negative effects wa production and in some cases, in the opinion of the supervisors, it has improved production both qualitatively and quantitatively.

## Approved For Release 2002/05/07 : CIA-RDP83-01004R000200050001-7

SUBJECT: Variable Workday at HPIC

- 4. More specifically, from the employee's viewpoint, the variable workday has ensed traffic and parking problems, all but eliminated the need for taking short periods of leave and has made it ensier to take core of many personal matters during the day when it is often some convenient to do so. For management, the variable workday has provided a testive hour period of staffing, improved employee morals, reduced short-term absenteeism such as that caused by tardiness, and reduced the need to process short-term leave requests.
- 5. The ferminor difficulties that did occur would be solved in the entire Center adopted a variable sortday schedule. These include the availability of library services and computer support.
- 6. We could like permission to implement a variable conday for all of NPIC. The schedule could be the same as the one that has been successfully tested in three of our branches -- a five-day cash, eighthour day bet een 0600 and 1800 hours. Each division and branch could be responsible for ensuring that their mission requirements would be accomplished.
